Analytics engineer with experience building foundational datasets, trusted metrics, attribution models, and self-service reporting for ads measurement and video commerce

Certifications:
Google Cloud Professional Data Engineer
AWS Cloud Practitioner

Specialties:
SQL, Python, Data modeling, ETL, A/B testing, cross-functional analytics in 0-to-1 environments

Data Projects: Selected Projects

EXPERIENCE

Business Intelligence Engineer, Ads Measurement
Amazon - Santa Clara, CA
May 2022 - Present

Engaged with Amazon's video shopping experience platform to drive high-quality video content creation and revenue growth.

- **Designed and owned analytics-ready data models** for batch and near-real-time reporting, converting raw event streams into curated fact and dimension tables that standardized measurement of engagement, conversion, and revenue across Amazon Live.
- Partnered cross-functionally with product, business, and engineering teams to identify measurement gaps, define 30+ trusted metrics, automate reporting workflows, and deliver business-facing dashboards in a fast-evolving 0-to-1 environment.
- **Led development of ads measurement pipelines** that unified Amazon DSP traffic and conversion data with Amazon Live reporting, delivering end-to-end campaign visibility across ad exposure, live-stream engagement, product discovery, and downstream purchase behavior.
- Built campaign-level attribution datasets for co-hosted **Amazon DSP + Amazon Live** campaigns by modeling reach, engagement, and conversion metrics at daily grain, enabling self-service reporting and campaign performance dashboards for advertisers and internal stakeholders.
- Built performance models and ranking frameworks by integrating engagement, conversion, and attributed revenue signals, improving decision-making on creator investment and contributing to 50% YoY livestream revenue growth and a 30% lift during Prime Day and Black Friday campaigns.

Data Scientist
Public Storage - Glendale, CA
Oct 2020 - Jun 2021

Worked for leading self-storage company to develop a customer analytics platform.

- **Data pipeline and storage design:** Utilized GCP data pipeline tools to collect user events log, design batch processing data pipelines and data warehouses.
- **Revenue Forecast and Customer Analysis:** Used time-series data to forecast revenue, built customer conversion prediction models, identified high value conversion signals/ dimensions and high value customers. Conducted customer segmentation analysis using unsupervised machine learning models.

EDUCATION

June 2021 - University of California, Davis
Master of Science, Business Analytics
Highlighted Coursework: Data Management, Data Visualization, Advanced Statistics, Big Data, Machine Learning, Organizational Issues in Implementing Analytics, Analytic Decision Making

July 2018 - UC, San Diego
MBA

July 2009 - Nagoya University
Master of Science, Economics

July 2005 - China Agricultural University
Bachelor of Economics
