Business Intelligence Engineer. Leveraging business and data analytics expertise, and driving impacts with data in eCommerce industry.

Certifications:
Google Cloud Professional Data Engineer
AWS Cloud Practitioner

Specialties:
SQL, Python, Tableau, QuickSight, ETL
A/B Testing, Data Modeling, Causal inference

Data Projects: Git-Link

EXPERIENCE

Business Intelligence Engineer, Amazon Live

Amazon - Santa Clara, CA

May 2022 - Now

Engaged with Amazon's video shopping experience platform to drive high-quality video content creation and revenue growth.

- **Designed and owned analytics-ready data models** supporting both batch and near-real-time use cases for Amazon Live, translating raw event streams into curated fact and dimension tables that enabled consistent measurement of user engagement, creator performance, and attributed revenue at scale.
- **Led zero-to-one metrics definition and governance**, independently defining 30+ core business and engagement metrics (e.g., engaged views/hour, creator value score, attributed revenue), implementing metric logic in SQL, and ensuring semantic consistency across dashboards, reports, and downstream consumers.
- **Built end-to-end analytics pipelines and self-service dashboards** used by 50+ stakeholders across marketing, creator management, and leadership, enabling weekly/monthly business reviews and directly informing content strategy, creator incentives, and campaign optimization.
- **Developed creator performance and ranking models** (Creators Value Score Model) by integrating multi-dimensional signals (engagement, conversion, revenue attribution), powering fairer incentive allocation and contributing to >50% YoY livestream revenue growth and >30% lift during major campaigns (Prime Day / Black Friday).
- **Established data quality, audit, and anomaly detection frameworks** using AWS Glue and CloudWatch, implementing automated monitoring and alerting that detected and resolved 20+ critical data issues in production, significantly improving trust in metrics used for compensation, forecasting, and executive decision-making.

Data Scientist

Public Storage - Glendale, CA

Oct 2020 - Jun 2021

Worked for leading self-storage company to develop a customer analytics platform.

- **Data pipeline and storage design:** Utilized GCP data pipeline tools to collect user events log, design batch processing data pipelines and data warehouses.
- **Revenue Forecast and Customer Analysis:** Used time-series data to forecast revenue, built customer conversion prediction models, identified high value conversion signals/dimensions and high value customers. Conducted customer segmentation analysis using unsupervised machine learning models.

EDUCATION

June 2021 - University of California, Davis

Master of Science, Business Analytics

Highlighted Coursework: Data Management, Data Visualization, Advanced Statistics, Big Data, Machine Learning, Organizational Issues in Implementing Analytics, Analytic Decision Making

July 2018 - UC, San Diego

MBA

July 2009 - Nagoya University

Master of Science, Economics

July 2005 - China Agricultural University

Bachelor of Economics
