Data scientist / analytics engineer with experience building trusted metrics, attribution models, experimentation frameworks, and self-service reporting for ads measurement and video commerce.

Certifications:
Google Cloud Professional Data Engineer
AWS Cloud Practitioner

Specialties:
SQL, Python, Data modeling, ETL, A/B testing, cross-functional analytics in 0-to-1 environments

Data Projects: Selected Projects

EXPERIENCE

Business Intelligence Engineer, Ads Measurement

Amazon - Santa Clara, CA

May 2022 - Present

Engaged with Amazon's video shopping experience platform to drive high-quality video content creation and revenue growth.

- **Built analytics-ready data models** for batch and near-real-time reporting, translating raw event data into curated fact and dimension tables that standardized measurement of engagement, conversion, and revenue across Amazon Live.
- Partnered with product, business, and engineering stakeholders to identify measurement gaps, define 30+ trusted metrics, and automate dashboards and reporting workflows that enabled data-driven decisions in a fast-evolving 0-to-1 business.
- **Led ads measurement initiatives** that unified Amazon DSP traffic and conversion data with Amazon Live reporting, enabling end-to-end analysis of campaign performance from ad exposure through conversion and informing advertiser strategy, campaign optimization, and partner planning.
- Developed campaign-level attribution datasets for co-hosted **Amazon DSP and Amazon Live campaigns**, modeling daily reach, engagement, and conversion metrics to support advertiser reporting, performance analysis, and revenue decision-making.
- Built performance models and ranking frameworks using engagement, conversion, and attributed revenue signals, improving creator investment decisions and contributing to 50% YoY livestream revenue growth and a 30% lift during Prime Day and Black Friday campaigns.

Data Scientist

Public Storage - Glendale, CA

Oct 2020 - Jun 2021

Worked for leading self-storage company to develop a customer analytics platform.

- Developed revenue forecasts and customer conversion models using time-series and predictive analytics, surfacing key drivers of conversion to support business planning and performance optimization.
- Built customer segmentation models using unsupervised machine learning on behavioral engagement data, enabling deeper cohort analysis and more targeted marketing strategies.
- Designed a dashboard to track customer journey funnel performance and marketing KPIs, delivering actionable insights that helped the Marketing team improve campaign monitoring and decision-making.

EDUCATION

June 2021 - University of California, Davis

Master of Science, Business Analytics

Highlighted Coursework: Data Management, Data Visualization, Advanced Statistics, Big Data, Machine Learning, Organizational Issues in Implementing Analytics, Analytic Decision Making

July 2018 - UC, San Diego

MBA

July 2009 - Nagoya University

Master of Science, Economics

July 2005 - China Agricultural University

Bachelor of Economics
